

BIMAssist™ for Revit® adds a powerful set of productivity tools to Autodesk Revit. BIMAssist for Revit currently supports Revit 2011-2018. Licensing is only available for issuing in the United States.

Complimentary for Advanced Solutions Revit Subscription Clients

BIMAssist for Revit Utilities

Case Update

- Update the casing of text elements in bulk for a single view or an entire project. Supports upper case, lower case, title case. Interface include type filtering, zoom to element, and individual element editing capabilities

Door Mark Manager

- Intuitive interface for selecting door marks to manage. Suggests appropriate values for missing door marks. Allows user to Zoom to particular doors. Quickly apply changes to door marks individually or in bulk

Family Processor (NEW)

- Create multiple shared parameter files from a master file, enabling you to split a large file into a smaller, more manageable file for individual projects or departments. The family parameter manager manipulates parameters by changing family parameters to shared parameters, deleting old or unnecessary parameters from manufacturer's content in bulk, or changing the values of multiple family's parameters at once.: The family materials manager can delete, rename, or add material definitions to multiple families at once.

Fire Rating Coordinator

- Compare and update fire ratings on hosted elements. Edit host or hosted fire rating values. Check for fire ratings that do not match in hosted elements. Mass update allowing fire ratings to be change to host or hosted value. Supports both built-in and custom parameters

Match Instance Parameters Features

- Updates parameters across many instances in a single operation. Allows changes to common parameters across multiple types. Very flexible instance selection interface (window select, direct click, all in current view, all in current project)

Note Block Creator

- Manages plan notes on a view by view basis. Automatically constructs note blocks for placement onto sheets without the use of any schedules. Includes audit functionality that detects missing/duplicate notes. Support the integration of custom annotation symbols

Project Cleaner

- Quickly removes unneeded plans, views, legends, schedules, linked files, etc. from project files. Optimizes the process of preparing projects received from other firms.

Room Phase Replicator

- Copies rooms from one phase to another. Specific levels may be selected. Parameters and tags may be toggled on or off.

Room Renumber

- Renumbers rooms to a specified sequence through selection. Inserts new rooms into an existing numbering scheme. Suggests room numbers based on door numbers and placement

Room Surface Parameter Extractor

- Extracts room surface (wall, ceiling, etc.) information (height, assembly function, material) into shared parameters. Allows surface information to be scheduled without manual data entry. Shared application parameters can be easily synchronized at any time.

Sheet Number Update

- Easily insert new sheets into an existing sequence without the need to manually renumber entire sheet sets. Quickly fill gaps in a sheet numbering sequence created by sheet deletion.

Space Synchronize

- Synchronizes room number/description from linked architectural models in bulk.

Text Find and Replace Features

- Find and replace text in a selection, a view, or the entire Revit project. Supports many common text types such as notes, room names, room numbers, walls, annotation types, and many family instance types. Utility also works on Parameters. Allows you to open a view to an element. Simply search for text and then double click the magnifying glass next to the result and the application will switch to a view of the element. Replace All, Replace Selection and single item edit supported

Subscription

BIMAssist™ for Revit® is available as a monthly subscription service starting at \$19 per seat, per month. Pricing is discounted for multi-month, multi-license purchases. BIMAssist™ for Revit® is FREE for Advanced Solutions Revit Subscription clients.
